Zimbra Mobile for iOS

Zimbra Mobile provides over-the-air synchronization of mail, contacts, calendar, tasks, and device security policy enforcement between the mobile device and an account on the mailbox server.

The ActiveSync protocol is used to configure and sync the Zimbra mailbox server with the native client that is used on a user's iOS device. Zimbra Mobile is compatible with iOS, Windows Mobile, Android, and other phones that support the ActiveSync protocol.
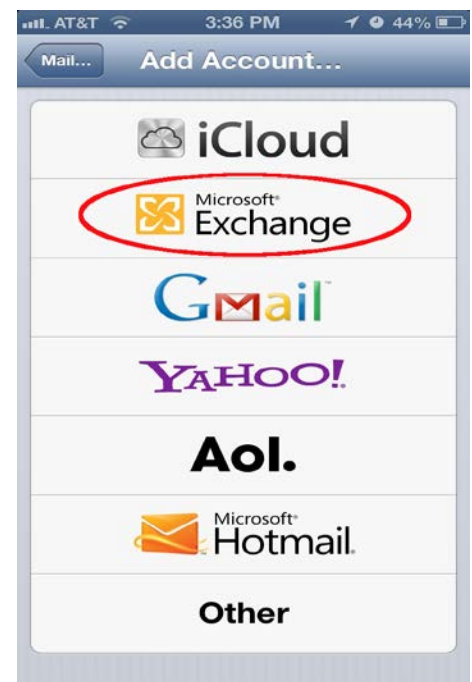

This document explains how to connect an iOS device to Zimbra using the ActiveSync protocol.

Installation Instructions:

1. From the settings menu, select **Mail, Contacts, and Calendars**.

2. Select **Add Account**.

3. Select **Microsoft Exchange**.

4. Enter your email address, password, and description.
   - **Email**: user.name@yourdomain.com
   - **Password**: password
   - **Description**: Zimbra
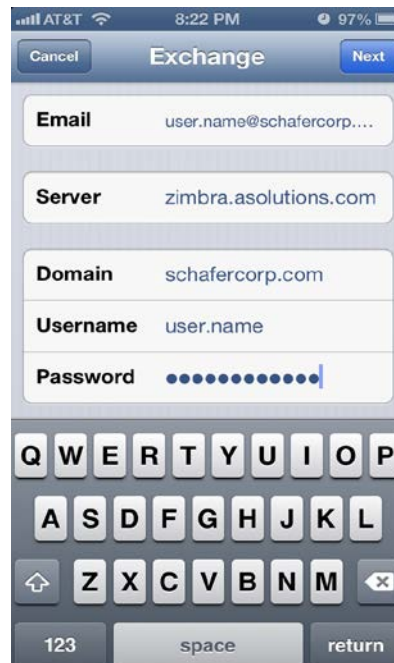

5. Click **Next**

6. Enter the Server, Domain, Username, and Password.

   - **Server**: zimbra.asolutions.com
   - **Domain**: yourdomain.com
   - **Username**: user.name
   - **Password**: password
   - Click **Next**

7. Select which items that you would like to sync and click **Save**.

8. If you choose to synchronize your contacts, the safest option is to k**eep existing contacts on your iPhone.**

NOTE: By connecting your phone to the Zimbra server, you explicitly agree to the enforced Schafer Mobile Access Policy. This policy includes the following requirements:

- You must set a PIN/Passcode for your device, with a minimum length of four digits/characters.
- The device will automatically lock after 15 minutes of inactivity and must be unlocked with the passcode.
- After 5 unsuccessful passcode attempts, the device will be wiped and will need to be restored**.**
